Pregnancy Screening Guide

The board recognizes that teenage pregnancy is a major contributor to the lack of prenatal care. The board acknowledges the need for early determination of pregnancy and early prenatal care. If requested by the student and deemed appropriate that the student receive a pregnancy test and cannot obtain one by her own means, a district school nurse may, with the student's signed consent, receive a urine specimen from the student and take the specimen off campus for testing.

It will be understood by the student prior to testing that her parent/legal guardian must be notified of positive test results. As a result of a positive test, the student will be urged to seek medical care as soon as possible.
